

ABSTRACT

5 A consumer tote for a roll of wallpaper is disclosed. The tote comprises a disposable exterior in which formed
a main access flap and a pair of axially disposed core access openings. The tote has an interior in which is
located a disposable core which is aligned with the access openings. Both openings expose a molded
coupling, one coupling attached to each end of the core. At least one of the couplings is a driven coupling and
adapted to engage a driving spindle that rotates the core.
